

Enterprise Rag Architecture

Project	Secure RAG + RBAC
Purpose	Dissertation Evaluation Dataset

Secure RAG Architecture

The enterprise RAG system integrates Retrieval-Augmented Generation with Role-Based Access Control.

Components

- 1. Authentication Layer
- 2. RBAC Authorization Engine
- 3. Embedding Pipeline
- 4. Vector Database
- 5. LLM Inference Engine
- 6. Guardrails and Monitoring

Security Controls

Document-level access control is enforced before retrieval.

Sensitive information masking is applied.

Audit logging is enabled for all user interactions.

Evaluation Metrics

Retrieval accuracy, hallucination reduction, latency, and RBAC enforcement accuracy.
